

8. Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called 'father' and derived class called 'son' which extends the base class. In father class, implement a constructor which takes the age and throw the exception WrongAge() when the input age < 0. In Son class, implement a constructor that takes both father and son's age and throws an exception if son's age is \geq father's age.

```
import java.util.*;
```

```
class WrongAgeException extends Exception
```

```
{
```

```
    String msg = new String();
```

```
    WrongAgeException(String x) {
```

```
        msg = x;
```

```
    }
```

```
    public String toString()
```

```
    {
```

```
        return msg;
```

```
    }
```

```
}
```

```
class father {
```

```
    int f_age; father() throws WrongAgeException {
```

```
        Scanner s = new Scanner(System.in);
```

```
        System.out.println("Enter father's age: ");
```

```
        f_age = s.nextInt();
```

```
        if (f_age < 0) {
```

```
            throw new WrongAgeException("father age < 0");
```

```
        }
```

```
void display() {
```

```
    System.out.println("father age : " + f.age);
```

```
}
```

```
class Son extends Father {
```

```
    int s.age;
```

```
    Son() throws Wrong Age Exception {
```

```
        Scanner s = new Scanner(System.in);
```

```
        System.out.println("Enter Son's age : ");
```

```
        s.age = s.nextInt();
```

```
        if (s.age < 0) {
```

```
            throw new Wrong Age Exception("Son age < 0");
```

```
        }
```

```
        else if (s.age > f.age)
```

```
        {
```

```
            throw new Wrong Age Exception("Son age is > that father's age!");
```

```
        }
```

```
}
```

```
void display() {
```

```
{
```

```
    System.out.println("father age : " + f.age);
```

```
    System.out.println("Son age : " + s.age);
```

```
}
```

```
}
```

```
class excep {
```

```
    public static void main(String [] args) {
```

```
        try
```

```
        {
```

```

8 father f = new father();
c f.display();
  sons: new son();
    s.display();
  }
  catch (WrongAgeException wae)
  {
    System.out.println(wae);
  }
}
}

```

Output

Enter father's age : 45

Enter son's age : 67

Son age > that father's age!

~~Enter father's age : 45~~

~~Enter son's age : 67~~

Enter father's age : 45

Enter son's age : 47

Son's age cannot be greater than father's age!
